## General information about the Federa

The Federa (Foundation Federation of Dutch Medical Scientific Societies) aims to represent scientific biomedical societies by promoting interdisciplinary communication through an annual thematic conference and self-regulation.

Deregulation has become a major activity e.g. by means of developing Codes of Conduct together with a legal expert. This is a necessity in an era of abundant and overlapping regulation of biomedical science, especially when EU-guidelines aim at harmonization.

The Federa bundles 24 scientific biomedical societies with all together 8.000 members and coordinates about 25 organizations in COREON.

The FederaDag is an annual biomedical scientific event, organized by Federa since 1960. We are proud to mention that the Netherlands organization for Health Research and Development (ZonMw) and the platform PostdocNL are participating with the organization of the FederaDag 2016.

### Programme committee *FederaDag 2016*
